NADCAP

NADCAP & Customer Expectations

Certification to AS 9100 and Nadcap is increasingly becoming an international customer contractual requirement and is often used as a discriminator during supplier selection.

Whilst, Glenair is a registered to AS9100 and an established SC21 company (silver), we have no immediate business needs to undertake a NADCAP assessment.

Nadcap accreditation is primarily based on:

SPECIAL PROCESSES

- Nondestructive Testing (NDT)
- Materials Testing (MTL)
- Heat Treating (HT)
- Coatings (CT)
- Chemical Processing (CP)
- Welding (WLD)
- Nonconventional Machining & Surface Enhancement (NMSE)

Glenair's product portfolio does include some of the above special processes, but these are outsourced to NADCAP suppliers where it is appropriate.

Primarily, this involves surface treatments.

We will continue to monitor the needs and expectations of customers and should there be a business need to seek NADCAP approval it will be considered.
